

## PROFILE

Accomplished data professional with two years of experience at Accenture designing and automating scalable ETL pipelines. My expertise in advanced analytics has been further solidified through a current MSc in Computer Science and a postgraduate program in Data Science & Machine Learning from Scaler Academy. Seeking to apply a unique blend of robust data engineering and machine learning skills to solve complex challenges and drive data-driven innovation.

## EDUCATION

University of Greenwich

MSc Computer Science

London, United Kingdom

2024 - 2025

[Scaler Academy](#)

Data Science and Machine Learning, [profile link](#)

Online, Live Classes

2023-2024

University of Delhi

BSc Computer Science, CGPA: 8.36/10

New Delhi, India

## WORK EXPERIENCE

Accenture

India

Data Engineer, Management & Governance Associate

2022-2024

- **Reduced manual data processing by 99%** by engineering and deploying automated end-to-end **ETL pipelines** using **SSIS and Autosys**, enabling real-time analytics for key business stakeholders.
- Engineered scalable Big Data solutions on AWS, **reducing data processing runtimes by 30%** for terabyte-scale datasets using Python, Spark, and SQL.
- **Improved data quality and integrity by 20%** by implementing **ML-driven anomaly detection models and statistical methods**, ensuring high-trust data for critical downstream analytics.
- Delivered new analytical capabilities by designing and implementing optimised data models and star schemas in a data warehouse environment, **enabling stakeholders with self-service analytics through interactive Tableau dashboards**.
- Contributed to a critical divestment program for a **major retail bank** by developing analytical models to identify and segment at-risk customers, informing the strategic roadmap for asset migration and regulatory compliance.
- **Ensured GDPR compliance and robust data governance** by developing comprehensive **documentation** and implementing technical controls, including data masking, encryption, and fine-grained access control.

## SKILLS

Languages: Python, SQL

Python Libraries: Pandas, NumPy, Scikit-learn, PySpark, Matplotlib, Seaborn

Big Data & Cloud: AWS (S3, EC2), Spark, Distributed Computing

Databases & ETL: SSIS, Autosys, Data Pipelines, Data Cleaning

BI & Visualisation: Tableau, Power BI, Advanced Excel

ML & Statistics: Anomaly Detection, Regression, Classification, Clustering, Statistical Analysis

## PROJECT

MSc Dissertation, University of Greenwich

Cluster Interpretation via. Dimensionality Reduction [\[Link\]](#)

Jan 2025 – Sept 2025

- Developed an end-to-end pipeline to address the **"black box" challenge in cluster analysis**, automatically generating **human-readable reports that explain the defining characteristics of each discovered data segment**.
- Engineered a **four faceted interpretation module** using SHAP and Decision Trees to explain the outputs of dimensionality reduction (UMAP, t-SNE) and clustering (k-Means) algorithms, making results actionable for non-technical stakeholders.
- Validated the framework's robustness and scalability across diverse public datasets, including **bioinformatics data with over 20,000 features** (RNA-Seq), and university surveys.
